

Report from UK:

I have designed various flashlight upgrades and modifications for the Maglite flashlight and therefore really appreciate the hard work and motivation involved to develop such an innovative product. I like the new prototype end cap as it adds to the versatility of the product.

I field test all products to ensure that the components will meet the harsh conditions that are found in tactical environments.

For the E/T light I tested for the following categories: Design, Performance, Ease of Use, Size, Comfort, Cleaning/ Maintenance, Quality, Durability, Storage, Versatility, Convenience and Application for Law Enforcement/Military.

In all these categories I have scored your E/T Light as excellent; Defined as a product that performs at a level above advertised. Specifications and demonstrates its usefulness and quality of workmanship every time it is used and can be *used for other purposes*.

I am in the process of designing a Personnel Recovery Kit (PRK) and without your E/T Light it would have been difficult to adhere to the size and weight constraints. The E/T light will replace 2 items: small flashlight and numerous red, green and IR chemical light-sticks.

I can also see the E/T Light being utilized in a man-overboard, aircraft ditching situation making it an excellent consideration for on any life preserver vest both civilian, maritime and military.
