WHAT ARE TRIAGE LIGHTS?

What are triage lights? – Triage is the process of sorting people according to how bad they are hurt. Triage Lights are lights that have all four triage colors, red, yellow, green and blue. When it gets dark lights are seen best and help rescuers help those who need help first.

WHAT DO THE COLORS MEAN?

Red = STOP!!!! Badly hurt (broken limb, lots of blood, etc.)

Yellow = CAUTION!!! Hurt, but able to move and help out, if necessary

Green = GO!!! Safe and sound

Blue = Marking a location such as a path or building

Case Scenario

A few scouts fell down a hill. The scouts at the top of the hill mark the location with blue, the uninjured scouts mark themselves with the green lights, the scouts with minor cuts and sprains mark themselves with yellow lights and the scouts with broken limbs gets marked with a red light.

..... = **location marked**

● = **uninjured Scouts**

● = **minor injured Scouts**

● = **seriously injured Scouts**

Other Benefits And Uses

- Reduce landfill space by utilizing reusable E/T Lights instead of wasteful Chemical Lights.
- Save money and stop replacing non reusable chemical lights
- Mark Trails
- Illuminate tents and camps
- Mark teams and individuals during night time activities or evening hikes
- Use green light for map reading
- Use red and yellow light for animal watching
- Use blue for blood trail lighting
- Lights will stay on from 3 days to 8 days – depending on color selection
- Last selection memory is activated
- Multiuse, value purchase item.

E/T LIGHT
